CREATING A CULTURE OF SAFETY

RESOURCE GUIDE

Midwest Kidney Network

October 2016
INFECTION CONTROL RESOURCES
CDC Approach to BSI Prevention in Dialysis Facilities
(i.e., the Core Interventions for Dialysis Bloodstream Infection (BSI) Prevention)

1. Surveillance and feedback using NHSN
Conduct monthly surveillance for BSIs and other dialysis events using CDC’s National Healthcare Safety Network (NHSN). Calculate facility rates and compare to rates in other NHSN facilities. Actively share results with front-line clinical staff.

2. Hand hygiene observations
Perform observations of hand hygiene opportunities monthly and share results with clinical staff.

3. Catheter/vascular access care observations
Perform observations of vascular access care and catheter accessing quarterly. Assess staff adherence to aseptic technique when connecting and disconnecting catheters and during dressing changes. Share results with clinical staff.

4. Staff education and competency
Train staff on infection control topics, including access care and aseptic technique. Perform competency evaluation for skills such as catheter care and accessing every 6-12 months and upon hire.

5. Patient education/engagement
Provide standardized education to all patients on infection prevention topics including vascular access care, hand hygiene, risks related to catheter use, recognizing signs of infection, and instructions for access management when away from the dialysis unit.

6. Catheter reduction
Incorporate efforts (e.g., through patient education, vascular access coordinator) to reduce catheters by identifying and addressing barriers to permanent vascular access placement and catheter removal.

7. Chlorhexidine for skin antisepsis
Use an alcohol-based chlorhexidine (>0.5%) solution as the first line skin antiseptic agent for central line insertion and during dressing changes.*

8. Catheter hub disinfection
Scrub catheter hubs with an appropriate antiseptic after cap is removed and before accessing. Perform every time catheter is accessed or disconnected.**

9. Antimicrobial ointment
Apply antibiotic ointment or povidone-iodine ointment to catheter exit sites during dressing change.***

* Povidone-iodine (preferably with alcohol) or 70% alcohol are alternatives for patients with chlorhexidine intolerance.

** If closed needleless connector device is used, disinfect device per manufacturer’s instructions.

*** See information on selecting an antimicrobial ointment for hemodialysis catheter exit sites on CDC’s Dialysis Safety website (http://www.cdc.gov/dialysis/prevention-tools/core-interventions.html#sites). Use of chlorhexidine-impregnated sponge dressing might be an alternative.

For more information about the Core Interventions for Dialysis Bloodstream Infection (BSI) Prevention, please visit http://www.cdc.gov/dialysis

National Center for Emerging and Zoonotic Infectious Diseases
Division of Healthcare Quality Promotion
Hemodialysis Central Venous Catheter Scrub-the-Hub Protocol

This protocol outlines a suggested approach to preparing catheter hubs prior to accessing the catheter for hemodialysis. It is based on evidence where available and incorporates theoretical rationale when published evidence is unavailable.

Definitions:
- **Catheter** refers to a central venous catheter (CVC) or a central line
- **Hub** refers to the end of the CVC that connects to the blood lines or cap
- **Cap** refers to a device that screws on to and occludes the hub
- **Limb** refers to the catheter portion that extends from the patient's body to the hub
- **Blood lines** refer to the arterial and venous ends of the extracorporeal circuit that connect the patient's catheter to the dialyzer

Catheter Connection and Disconnection Steps:

**Connection Steps**
1. Perform hand hygiene and don new clean gloves.
2. Clamp the catheter *(Note: Always clamp the catheter before removing the cap. Never leave an uncapped catheter unattended)*.
3. Disinfect the hub with caps removed using an appropriate antiseptic *(see notes)*.
   a. *(Optional)* Prior to cap removal, disinfect the caps and the part of the hub that is accessible and discard the antiseptic pad (i.e., use a separate antiseptic pad for the next step).
   b. Remove the caps and disinfect the hub with a new antiseptic pad for each hub. Scrub the sides (threads) and end of the hub thoroughly with friction, making sure to remove any residue (e.g., blood).
   c. Using the same antiseptic pad, apply antiseptic with friction to the catheter, moving from the hub at least several centimeters towards the body. Hold the limb while allowing the antiseptic to dry.
   d. Use a separate antiseptic pad for each hub/catheter limb. Leave hubs "open" (i.e., uncapped and disconnected) for the shortest time possible.
4. Always handle the catheter hubs aseptically. Once disinfected, do not allow the catheter hubs to touch nonsterile surfaces.
5. Attach sterile syringe, unclamp the catheter, withdraw blood, and flush per facility protocol.
6. Repeat for other limb (this might occur in parallel).
7. Connect the ends of the blood lines to the catheter aseptically.
8. Remove gloves and perform hand hygiene.

**Disconnection Steps:**
1. Perform hand hygiene and don new clean gloves.
2. Clamp the catheter *(Note: Always clamp the catheter before disconnecting. Never leave an uncapped catheter unattended)*.
3. Disinfect the catheter hub before applying the new cap using an appropriate antiseptic *(see notes)*.
   a. *(Optional)* Disinfect the connection prior to disconnection. If this is done, use a separate antiseptic pad for the subsequent disinfection of the hub.
   b. Disconnect the blood line from the catheter and disinfect the hub with a new antiseptic pad. Scrub the sides (threads) and end of the hub thoroughly with friction, making sure to remove any residue (e.g., blood).
   c. Use a separate antiseptic pad for each hub. Leave hubs "open" (i.e., uncapped and disconnected) for the shortest time possible.
4. Always handle the catheter hubs aseptically. Once disinfected, do not allow the catheter hubs to touch nonsterile surfaces. Hold the catheter until the antiseptic has dried.
5. Attach the new sterile caps to the catheter aseptically. Use caution if tape is used to secure caps to the catheter *(see notes)*.
6. Ensure that catheter is still clamped.
7. Remove gloves and perform hand hygiene.
Notes/Discussion:

Antiseptic Use and Selection

As described in the 2011 CDC/Healthcare Infection Control Practices Advisory Committee (HICPAC) Guidelines for the Prevention of Intravascular Catheter-Related Infections, prior to accessing the catheter hub it should be disinfected with an appropriate antiseptic (greater than 0.5% chlorhexidine with alcohol, 70% alcohol, or 10% povidone-iodine). There is not enough evidence to recommend one antiseptic over the others. Generally, antiseptics should be allowed to dry for maximal effect.

If using 70% alcohol, sterile antiseptic pads should be used (sterile pads are labeled sterile and packaging for nonsterile pads often does not state whether the pads are sterile or nonsterile). For practical reasons, pads or similar products might be preferred over other forms of antiseptics (e.g., swabsticks) for disinfecting the catheter as they are malleable and allow for vigorous cleaning of small spaces.

If using an antiseptic that leaves a residue (e.g., chlorhexidine), avoid allowing large amounts of antiseptic to enter the lumen of the catheter to avoid potential toxicities to the patient.

If using chlorhexidine, removing all blood residue is particularly important to maximize the effect of the antiseptic.

Soaking Caps

The role of soaking caps in an antiseptic prior to removing them is not clear. It is not a CDC/HICPAC recommendation. This procedure is described in the 2000 National Kidney Foundation’s Kidney Disease Outcomes Quality Initiative (KDOQI) Vascular Access Guidelines but was not included in the 2006 update.

Handling Catheter Hubs

Catheter hubs should always be handled aseptically. Once disinfected, the catheter hubs should not be allowed to touch nonsterile surfaces. This might be best performed by holding them until the antiseptic dries. During this time, the staff member performing the procedure should also ensure that the catheter remains clamped.

When disinfecting catheter hubs, clean, nonsterile gloves can be used if aseptic technique is maintained.

Bloodline Disinfection

When accessing the line, disinfecting the ends of the sterile blood lines is not required if care has been taken not to contaminate the ends of the blood lines (i.e., through careful aseptic technique). Blood lines can become contaminated during connections and disconnections, as well as during the priming process. Contact with contaminated prime waste in prime buckets that have not been properly cleaned and disinfected or through backflow from waste handling ports must be avoided. Disinfecting the bloodlines does not address this issue.

Disconnection and Line Reversals

Catheter hubs should be disinfected again after disconnecting from bloodlines and before replacing a new cap at the end of a treatment. This should be done in a manner similar to that used when disinfecting the hub prior to accessing. Disinfecting the catheter hub and the end of the extracorporeal blood line should also be performed if, during a treatment, a patient must be disconnected and their blood is re-circulated. Anytime a patient’s circuit is disconnected this should be done aseptically and the number of times a patient’s catheter is disconnected from the blood lines should be minimized to the extent possible.

Securing Caps with Tape

Caution should be used if taping caps on to hubs between treatments. Tape can leave residue on the hubs that might make disinfecting them more difficult.

Use of Masks

Although data supporting the use of masks during catheter accessing/deaccessing to prevent vascular access infections is lacking, this practice is recommended for patients and staff in the 2000 KDOQI guidelines and is included in the Centers for Medicare and Medicaid Services (CMS) End Stage Renal Disease Program Conditions for Coverage Interpretive Guidance.

Personal Protective Equipment (PPE)

Proper PPE should always be worn by staff to avoid exposure to potentially infectious blood and body fluids when connecting/disconnecting catheters.

Aseptic Technique

This includes practices that prevent the contamination of clean/sterile items and surfaces. Once tasks requiring aseptic technique have been started, care must be taken to avoid contamination of gloves and other clean/sterile items that can occur when touching dirty surfaces (e.g., positioning patient, using computer keyboard).

AUDIT TOOL RESOURCES
Survey on Patient Safety

Instructions

This survey asks for your opinions about patient safety issues, medical error, and event reporting in your facility and will take about 10 to 15 minutes to complete.

If you do not wish to answer a question, or if a question does not apply to you, you may leave your answer blank.

- An “event” is defined as any type of error, mistake, incident, accident, or deviation, regardless of whether or not it results in patient harm.
- “Patient safety” is defined as the avoidance and prevention of patient injuries or adverse events resulting from the processes of health care delivery.

SECTION A: Your Work Area/Unit

In this survey, think of your work area as the unit, department, or clinical area of your facility where you spend most of your work time or provide most of your clinical services.

What is your primary work area or unit in your facility? Select ONE answer.

☐ a. Many different units/No specific unit
☐ b. Medicine (non-surgical)
☐ c. Surgery
☐ d. Obstetrics
☐ e. Pediatrics
☐ f. Emergency department
☐ g. Intensive care unit (any type)
☐ h. Psychiatry/mental health
☐ i. Rehabilitation
☐ j. Pharmacy
☐ k. Laboratory
☐ l. Radiology
☐ n. Other, please specify: __________________________

☑ m. Anesthesiology

Please indicate your agreement or disagreement with the following statements about your work area/unit.

Think about your work area/unit...

<table>
<thead>
<tr>
<th>Statement</th>
<th>Strongly Disagree</th>
<th>Disagree</th>
<th>Neither</th>
<th>Agree</th>
<th>Strongly Agree</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. People support one another in this unit</td>
<td>□ 1</td>
<td>□ 2</td>
<td>□ 3</td>
<td>□ 4</td>
<td>□ 5</td>
</tr>
<tr>
<td>2. We have enough staff to handle the workload</td>
<td>□ 1</td>
<td>□ 2</td>
<td>□ 3</td>
<td>□ 4</td>
<td>□ 5</td>
</tr>
<tr>
<td>3. When a lot of work needs to be done quickly, we work together as a team to get the work done</td>
<td>□ 1</td>
<td>□ 2</td>
<td>□ 3</td>
<td>□ 4</td>
<td>□ 5</td>
</tr>
<tr>
<td>4. In this unit, people treat each other with respect</td>
<td>□ 1</td>
<td>□ 2</td>
<td>□ 3</td>
<td>□ 4</td>
<td>□ 5</td>
</tr>
<tr>
<td>5. Staff in this unit work longer hours than is best for patient care</td>
<td>□ 1</td>
<td>□ 2</td>
<td>□ 3</td>
<td>□ 4</td>
<td>□ 5</td>
</tr>
</tbody>
</table>
SECTION A: Your Work Area/Unit (continued)

Think about your work area/unit...

6. We are actively doing things to improve patient safety ........................................

7. We use more agency/temporary staff than is best for patient care ....................

8. Staff feel like their mistakes are held against them ...........................................

9. Mistakes have led to positive changes here ...........................................................

10. It is just by chance that more serious mistakes don’t happen around here .............................................................

11. When one area in this unit gets really busy, others help out ....................

12. When an event is reported, it feels like the person is being written up, not the problem ..........................................................

13. After we make changes to improve patient safety, we evaluate their effectiveness ..........................................................

14. We work in "crisis mode" trying to do too much, too quickly ........................

15. Patient safety is never sacrificed to get more work done ..............................

16. Staff worry that mistakes they make are kept in their personnel file ...........

17. We have patient safety problems in this unit ...........................................

18. Our procedures and systems are good at preventing errors from happening ..........................................................

SECTION B: Your Supervisor/Manager

Please indicate your agreement or disagreement with the following statements about your immediate supervisor/manager or person to whom you directly report.

1. My supervisor/manager says a good word when he/she sees a job done according to established patient safety procedures ........................................

2. My supervisor/manager seriously considers staff suggestions for improving patient safety ..........................................................

3. Whenever pressure builds up, my supervisor/manager wants us to work faster, even if it means taking shortcuts ..........................................................

4. My supervisor/manager overlooks patient safety problems that happen over and over ..........................................................
SECTION C: Communications

How often do the following things happen in your work area/unit?

Think about your work area/unit...

1. We are given feedback about changes put into place based on event reports .................................................................

☐ □ □ □ □

2. Staff will freely speak up if they see something that may negatively affect patient care .................................................................

☐ □ □ □ □

3. We are informed about errors that happen in this unit ......................

☐ □ □ □ □

4. Staff feel free to question the decisions or actions of those with more authority .................................................................

☐ □ □ □ □

5. In this unit, we discuss ways to prevent errors from happening again ..... 

☐ □ □ □ □

6. Staff are afraid to ask questions when something does not seem right ....

☐ □ □ □ □

SECTION D: Frequency of Events Reported

In your work area/unit, when the following mistakes happen, how often are they reported?

1. When a mistake is made, but is caught and corrected before affecting the patient, how often is this reported? ....................................................

☐ □ □ □ □

2. When a mistake is made, but has no potential to harm the patient, how often is this reported? .............................................................

☐ □ □ □ □

3. When a mistake is made that could harm the patient, but does not, how often is this reported? .............................

☐ □ □ □ □

SECTION E: Patient Safety Grade

Please give your work area/unit an overall grade on patient safety.

☐  □  □  □  □

A Excellent  B Very Good  C Acceptable  D Poor  E Failing

SECTION F: Your Facility

Please indicate your agreement or disagreement with the following statements about your facility.

Think about your facility...

1. Management in this facility provides a work climate that promotes patient safety .................................................................

☐ □ □ □ □

2. Units in this facility do not coordinate well with each other ................

☐ □ □ □ □

3. Things “fall between the cracks” when transferring patients from one unit to another .................................................................

☐ □ □ □ □

4. There is good cooperation among units that need to work together ....

☐ □ □ □ □
SECTION F: Your Facility (continued)

Think about your facility…

5. Important patient care information is often lost during shift changes ........... □ 1 □ 2 □ 3 □ 4 □ 5

6. It is often unpleasant to work with staff from other units in this facility ....... □ 1 □ 2 □ 3 □ 4 □ 5

7. Problems often occur in the exchange of information across units in this facility................................................................. □ 1 □ 2 □ 3 □ 4 □ 5

8. The actions of management in this facility show that patient safety is a top priority .................................................................................................................. □ 1 □ 2 □ 3 □ 4 □ 5

9. Management in this facility seems interested in patient safety only after an adverse event happens .............................................................. □ 1 □ 2 □ 3 □ 4 □ 5

10. Units in this facility work well together to provide the best care for patients .................................................................................................................. □ 1 □ 2 □ 3 □ 4 □ 5

11. Shift changes are problematic for patients in this facility ...................... □ 1 □ 2 □ 3 □ 4 □ 5

SECTION G: Number of Events Reported

In the past 12 months, how many event reports have you filled out and submitted?

☐ a. No event reports   ☐ d. 6 to 10 event reports
☐ b. 1 to 2 event reports   ☐ e. 11 to 20 event reports
☐ c. 3 to 5 event reports   ☐ f. 21 event reports or more

SECTION H: Background Information

This information will help in the analysis of the survey results.

1. How long have you worked in this facility?

☐ a. Less than 1 year   ☐ d. 11 to 15 years
☐ b. 1 to 5 years   ☐ e. 16 to 20 years
☐ c. 6 to 10 years   ☐ f. 21 years or more

2. How long have you worked in your current work area/unit?

☐ a. Less than 1 year   ☐ d. 11 to 15 years
☐ b. 1 to 5 years   ☐ e. 16 to 20 years
☐ c. 6 to 10 years   ☐ f. 21 years or more

3. Typically, how many hours per week do you work in this facility?

☐ a. Less than 20 hours per week   ☐ d. 60 to 79 hours per week
☐ b. 20 to 39 hours per week   ☐ e. 80 to 99 hours per week
☐ c. 40 to 59 hours per week   ☐ f. 100 hours per week or more
SECTION H: Background Information (continued)

4. What is your staff position in this facility? Select ONE answer that best describes your staff position.

- [ ] a. Registered Nurse
- [ ] b. Physician Assistant/Nurse Practitioner
- [ ] c. LVN/LPN
- [ ] d. Patient Care Asst/Aide/Care Partner
- [ ] e. Attending/Staff Physician
- [ ] f. Resident Physician/Physician in Training
- [ ] g. Pharmacist
- [ ] h. Dietician
- [ ] i. Unit Assistant/Clerk/Secretary
- [ ] j. Respiratory Therapist
- [ ] k. Physical, Occupational, or Speech Therapist
- [ ] l. Technician (e.g., EKG, Lab, Radiology)
- [ ] m. Administration/Management
- [ ] n. Other, please specify:

5. In your staff position, do you typically have direct interaction or contact with patients?

- [ ] a. YES, I typically have direct interaction or contact with patients.
- [ ] b. NO, I typically do NOT have direct interaction or contact with patients.

6. How long have you worked in your current specialty or profession?

- [ ] a. Less than 1 year
- [ ] b. 1 to 5 years
- [ ] c. 6 to 10 years
- [ ] d. 11 to 15 years
- [ ] e. 16 to 20 years
- [ ] f. 21 years or more

SECTION I: Your Comments

Please feel free to write any comments about patient safety, error, or event reporting in your facility.

THANK YOU FOR COMPLETING THIS SURVEY.
Infection Control Assessment Tool for Hemodialysis Facilities

This tool is intended to assist in the assessment of infection control programs and practices in dialysis facilities. In order to complete the assessment, direct observation of infection control practices will be necessary. To facilitate the assessment, health departments are encouraged to share this tool with facilities in advance of their visit.

Dialysis facilities that report to NHSN complete an Outpatient Dialysis Center Practices Survey each year. The survey responses can be accessed in NHSN or the facility can be asked to retrieve and print their completed NHSN survey in advance of the site visit. The elements included on this assessment tool are intended to complement the NHSN survey. For facilities that do not report to NHSN, consider asking the facility to complete the practice elements of the survey.

#### Assessment

| ✓ CDC Video: Preventing BSIs in Outpatient Hemodialysis Patients: Best Practices for Dialysis Staff |
| CDC Approach to BSI Prevention in Dialysis Facilities (i.e., Core Interventions for Dialysis BSI Prevention) |
| CDC Hemodialysis Central Venous Catheter Scrub-the-Hub Protocol |

#### CDC Dialysis audit tools:

- ✓ Hand hygiene
- ✓ Catheter connection & disconnection
- ✓ Catheter exit site care
- ✓ Arteriovenous fistula & graft cannulation and decannulation
- ✓ Injectable medication preparation & administration
- ✓ Routine disinfection of dialysis station

#### CDC Dialysis checklists:

- ✓ Catheter connection & disconnection
- ✓ Catheter exit site care
- ✓ Arteriovenous fistula & graft cannulation and decannulation
- ✓ Injectable medication preparation & administration
- ✓ Routine disinfection of dialysis station

#### Other (specify):

- N/A, no CDC tools used
### III. Healthcare Personnel (HCP) Safety

<table>
<thead>
<tr>
<th>Elements to be assessed</th>
<th>Assessment</th>
<th>Notes/Areas for Improvement</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Does the facility provide post-exposure evaluation and follow-up, including prophylaxis as appropriate, to healthcare personnel (HCP) at no cost following an exposure event?</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>2. Does the facility track HCP exposure events, evaluate event data and develop/implement corrective action plans to reduce incidence of such events?</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>3. Does the facility offer hepatitis B vaccine to personnel who may be exposed to blood or body fluids through their job duties?</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>4. Does the facility offer influenza vaccine to all personnel?</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>5. Does the facility conduct baseline tuberculosis (TB) screening of HCP?</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>6. Does the facility have work-exclusion policies that encourage reporting of illnesses and do not penalize with loss of wages, benefits, or job status?</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>7. Does the facility educate HCP on prompt reporting of illness or job-related injury to supervisor and/or occupational health?</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
</tbody>
</table>

### IV. Surveillance and Disease Reporting

<table>
<thead>
<tr>
<th>Elements to be assessed</th>
<th>Assessment</th>
<th>Notes/Areas for Improvement</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Does someone in the facility know the facility’s bloodstream infection (BSI) rate in NHSN or BSI standardized infection ratio (SIR)?</td>
<td>○ Yes ○ No</td>
<td>○ Not Applicable (Data are not reported to NHSN)</td>
</tr>
<tr>
<td>a. If Yes, does the facility share rate data with front-line clinical staff?</td>
<td>○ Yes ○ No</td>
<td>○ Not Applicable (Data are not reported to NHSN)</td>
</tr>
<tr>
<td>2. Does the facility have a policy that mandates blood culture collection before antimicrobial administration any time a BSI is suspected? If yes, consider how is the policy implemented and enforced</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>3. Does the facility conduct routine screening of hemodialysis patients for hepatitis C antibody at the recommended interval?</td>
<td>○ Yes, on admission and every 6 months thereafter for susceptible patients ○ No</td>
<td></td>
</tr>
<tr>
<td>4. Does the facility know how to report clusters of infections, adverse events, or a new hepatitis B/C case to public health?</td>
<td>○ Yes, knows what to report and how ○ No</td>
<td></td>
</tr>
<tr>
<td>5. Does the facility have a system in place to communicate infection or colonization with a multidrug resistant organism (MDRO) to other healthcare facilities upon transfer?</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>Elements to be assessed</td>
<td>Assessment</td>
<td>Notes/Areas for Improvement</td>
</tr>
<tr>
<td>----------------------------------------------------------------------------------------</td>
<td>---------------------</td>
<td>-----------------------------</td>
</tr>
<tr>
<td><strong>In non-clinical areas:</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>1. Does the facility have signs posted at entrances with instructions to patients with symptoms of respiratory infection to:</td>
<td>○ Yes ○ No</td>
<td>○ Visually confirmed</td>
</tr>
<tr>
<td>• cover their mouth/nose when coughing or sneezing?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• use and dispose of tissues?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• perform hand hygiene after contact with respiratory secretions?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. Does the facility provide a means for patients to perform hand hygiene in or near waiting areas?</td>
<td>○ Yes ○ No</td>
<td>○ Visually confirmed</td>
</tr>
<tr>
<td>3. Does the facility provide space and encourage persons with symptoms of respiratory infection to sit as far away from others as possible?</td>
<td>○ Yes ○ No</td>
<td>○ Visually confirmed</td>
</tr>
<tr>
<td>4. Does the facility provide tissues and no-touch receptacles for disposal of tissues?</td>
<td>○ Yes ○ No</td>
<td>○ Visually confirmed</td>
</tr>
<tr>
<td>Applies during periods of increased respiratory infections in the community</td>
<td></td>
<td></td>
</tr>
<tr>
<td>5. Does the facility offer facemasks upon facility entry to patients with symptoms of respiratory infection?</td>
<td>○ Yes ○ No</td>
<td>○ Visually confirmed</td>
</tr>
<tr>
<td>Applies during periods of increased respiratory infections in the community</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>In clinical areas:</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>6. Does the facility have the ability to separate symptomatic patients (by at least 6 feet) from other patients and their stations during dialysis treatment?</td>
<td>○ Yes ○ No</td>
<td>○ Visually confirmed</td>
</tr>
</tbody>
</table>
### VI. Personal Protective Equipment (PPE)

<table>
<thead>
<tr>
<th>Elements to be assessed</th>
<th>Assessment</th>
<th>Notes/Areas for Improvement</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1.</strong> Facility provides job-specific training to HCP on proper selection and use of PPE:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>i. Upon hire, prior to provision of care</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>ii. Annually</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td><strong>2.</strong> Does the facility validate HCP competency with use of PPE?</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td><strong>3.</strong> Supplies necessary for adherence to PPE recommendations are available and located near point of use:</td>
<td></td>
<td>○ Visually confirmed</td>
</tr>
<tr>
<td>i. Gloves</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>ii. Gowns</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>iii. Face Shields/Eye Protection</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>iv. Face Masks</td>
<td>○ Yes ○ No</td>
<td>○ Not Applicable (facility does not use face masks)</td>
</tr>
<tr>
<td><strong>Visual confirmation suggested.</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>4.</strong> Does the facility have a policy/protocol for staff to routinely change/launder gowns (in the absence of soilage)?</td>
<td>○ Yes</td>
<td></td>
</tr>
<tr>
<td>Note: This question applies to patients in the general treatment area, not patients in isolation.</td>
<td>○ At the end of the shift</td>
<td>○ At the end of the day</td>
</tr>
<tr>
<td></td>
<td>○ Other (specify):</td>
<td>○ No</td>
</tr>
</tbody>
</table>

### VII. Environmental Cleaning

<table>
<thead>
<tr>
<th>Elements to be assessed</th>
<th>Assessment</th>
<th>Notes/Areas for Improvement</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1.</strong> Does the facility have written policies and procedures for routine cleaning and disinfection of environmental surfaces, including clearly defining responsible personnel?</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>Note: Policy and procedures should identify staff responsible for performing cleaning and disinfection as well as those responsible for selection and preparation of disinfectant solution(s).</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>2.</strong> Does the facility provide job-specific training to responsible personnel on environmental cleaning and disinfection upon hire, at least annually, and when policies/procedures change?</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>Note: If environmental cleaning is performed by contract personnel, facility should verify this is provided by contracting company.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### VII. Environmental Cleaning, continued

<table>
<thead>
<tr>
<th>Elements to be assessed</th>
<th>Assessment</th>
<th>Notes/Areas for Improvement</th>
</tr>
</thead>
<tbody>
<tr>
<td>3. Does the facility regularly audit (monitor and document) adherence to cleaning and disinfection procedures?</td>
<td>☐ Yes (facility should be able to show results of these audits) ☐ No</td>
<td></td>
</tr>
<tr>
<td>4. Does the facility have a policy/procedure for decontamination of spills of blood or other body fluids?</td>
<td>☐ Yes ☐ No</td>
<td>☐ Visually confirmed</td>
</tr>
<tr>
<td>a. If Yes, are supplies necessary to clean the blood spill (e.g., proper disinfectant or spill kit) readily available and located near point of use?</td>
<td>☐ Yes ☐ No</td>
<td>☐ Visually confirmed (facility does not have a policy for decontamination of spills of blood or other body fluids)</td>
</tr>
<tr>
<td></td>
<td>Visual confirmation suggested.</td>
<td></td>
</tr>
<tr>
<td>5. Does the facility have a policy/procedure for routinely emptying AND cleaning reusable waste containers (e.g. leakproof containers used for disposal of used dialyzers and tubing)?</td>
<td>☐ Yes ☐ No</td>
<td>☐ Visually confirmed (facility does not have a policy for decontamination of spills of blood or other body fluids)</td>
</tr>
<tr>
<td>i. Emptying</td>
<td>☐ Yes ☐ No</td>
<td>☐ Visually confirmed (facility does not have a policy for decontamination of spills of blood or other body fluids)</td>
</tr>
<tr>
<td>ii. Cleaning</td>
<td>☐ Yes ☐ No</td>
<td>☐ Visually confirmed (facility does not have a policy for decontamination of spills of blood or other body fluids)</td>
</tr>
<tr>
<td>6. Does the facility have policies and procedures to ensure reusable medical devices (e.g., thermometers, stethoscopes, blood pressure cuffs) are cleaned appropriately between patients?</td>
<td>☐ Yes ☐ No</td>
<td>☐ Visually confirmed (facility does not have a policy for decontamination of spills of blood or other body fluids)</td>
</tr>
<tr>
<td>i. Dialysis Clamps</td>
<td>☐ Yes ☐ No</td>
<td>☐ Visually confirmed (facility does not have a policy for decontamination of spills of blood or other body fluids)</td>
</tr>
<tr>
<td>ii. Blood Glucose Monitor(s)</td>
<td>☐ Yes ☐ No</td>
<td>☐ Visually confirmed (facility does not have a policy for decontamination of spills of blood or other body fluids)</td>
</tr>
<tr>
<td>iii. Dialysate Conductivity/pH meter(s)</td>
<td>☐ Yes ☐ No</td>
<td>☐ Visually confirmed (facility does not have a policy for decontamination of spills of blood or other body fluids)</td>
</tr>
</tbody>
</table>
### VIII. Dialyzer Reuse and Reprocessing

<table>
<thead>
<tr>
<th>Elements to be assessed</th>
<th>Assessment</th>
<th>Notes/Areas for Improvement</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Does the facility reuse dialyzers?</td>
<td>☐ Yes (specify):</td>
<td></td>
</tr>
<tr>
<td>Note: If the facility reprocesses dialyzers on-site, consider performing observations of dialyzer reprocessing.</td>
<td>☐ No <em>If No, skip to Hand Hygiene</em></td>
<td></td>
</tr>
</tbody>
</table>

#### A. If Yes, complete the following section. Questions 2 & 3 apply to all facilities that reuse dialyzers—reprocessing can be on- or off-site.

<table>
<thead>
<tr>
<th>2. Does the facility document informed consent for patients who participate in dialyzer reuse?</th>
<th>☐ Yes (facility should be able to provide informed consent document)</th>
<th>☐ Visually confirmed</th>
</tr>
</thead>
<tbody>
<tr>
<td>Visual confirmation suggested.</td>
<td>☐ No</td>
<td></td>
</tr>
<tr>
<td>☐ Not Applicable (Facility does not reuse dialyzers)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

| 3. Does the facility have policies and procedures to ensure that dialyzers are cleaned and reprocessed appropriately prior to reuse? | ☐ Yes ☐ No | |
| Note: If reprocessing is performed off-site, facility policies and procedures should address safe handling of used dialyzers prior to reprocessing and assessment of disinfection process after reprocessing. | ☐ Not Applicable (Facility does not reuse dialyzers) | |

#### B. If answered Yes to Question 1 and dialyzers are reprocessed on site, complete the following section. Questions 4-7 apply to facilities that perform dialyzer reprocessing on-site. *Consider performing observations of dialyzer reprocessing.*

| 4. Does the facility train personnel responsible for reprocessing dialyzers on proper selection and use of PPE and recommended steps for reprocessing equipment? | ☐ Yes ☐ No | |
| ☐ Not Applicable (Facility does not reuse dialyzers or dialyzer reprocessing performed off-site) | |

| 5. Does the facility test the competency of personnel responsible for reprocessing dialyzers upon hire and at least annually? | ☐ Yes ☐ No | |
| ☐ Not Applicable (Facility does not reuse dialyzers or dialyzer reprocessing performed off-site) | |

| 6. Does the facility regularly audit (monitor and document) adherence to reprocessing procedures and provide feedback to personnel regarding their performance? | ☐ Yes (facility should be able to show results of these audits) | |
| ☐ No | |
| ☐ Not Applicable (Facility does not reuse dialyzers or dialyzer reprocessing performed off-site) | |

<p>| 7. Does the facility perform routine maintenance for reprocessing equipment (e.g., automated reprocessors) by qualified personnel in accordance with manufacturer instructions? | ☐ Yes ☐ No | |
| Confirm maintenance records are available. | ☐ Not Applicable (specify): | |
| ☐ Only manual reprocessing methods used | |
| ☐ Facility does not reuse dialyzers or dialyzer reprocessing performed off-site | |</p>

</tr>
<tr>
<td>i. Upon hire, prior to provision of care</td>
<td>○ Yes ○ No</td>
<td></td>
</tr>
<tr>
<td>ii. Annually</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Does the facility use an alcohol-based chlorhexidine (&gt;0.5%) solution as the first line skin antiseptic agent during dressing changes of catheters?</td>
<td>○ Yes ○ No</td>
<td>○ Visually confirmed</td>
</tr>
<tr>
<td>Visual confirmation suggested.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>5. Does the facility routinely apply an antibiotic ointment or povidone-iodine ointment to catheter exit sites during dressing changes?</td>
<td>○ Yes</td>
<td>○ Visually confirmed</td>
</tr>
<tr>
<td>Visual confirmation suggested.</td>
<td>○ No (Specify:)</td>
<td></td>
</tr>
<tr>
<td>Note: CDC recommends using povidone iodine ointment or bacitracin/gramicidin/polymyxin B ointment (not currently available in the United States). Triple antibiotic ointment (bacitracin/neomycin/polymyxin B) is available and might have a similar benefit. Mupirocin ointment is not recommended due to concerns about development of antimicrobial resistance.</td>
<td>○ No ointment used, but chlorhexidine dressing used</td>
<td></td>
</tr>
<tr>
<td></td>
<td>○ Neither ointment nor chlorhexidine dressing used</td>
<td></td>
</tr>
<tr>
<td>6. Does the facility routinely scrub catheter hubs with appropriate antiseptic after the caps are removed and before accessing the catheter?</td>
<td>○ Yes ○ No</td>
<td>○ Visually confirmed</td>
</tr>
<tr>
<td>Visual confirmation suggested.</td>
<td>○ Not Applicable (Facility uses needleless connector devices)</td>
<td></td>
</tr>
<tr>
<td>a. If N/A (facility uses needleless connector devices), does the facility routinely scrub the catheter hubs when the needless connectors are removed?</td>
<td>○ Yes ○ No</td>
<td>○ Not Applicable (Facility does not use needleless connector devices)</td>
</tr>
</tbody>
</table>
# XI. Injection Safety

<table>
<thead>
<tr>
<th>Elements to be assessed</th>
<th>Assessment</th>
<th>Notes/Areas for Improvement</th>
</tr>
</thead>
</table>
| 1. Supplies necessary for adherence to safe injection practices are available and located near point of use.  
*Visual confirmation suggested.* | i.  ○ Yes ○ No  
ii.  ○ Yes ○ No | ○ Visually confirmed |
| i. Sharps containers | | |
| ii. Needles/cannulae with safety feature | | |
| 2. Does the facility have policies/procedures to ensure sharps containers are emptied and/or changed on a regular basis and when needed? | ○ Yes ○ No | |
| 3. Does the facility use a clean room that is physically separate from the treatment area for storage and preparation of injectable medications?  
*Visual confirmation suggested.* | ○ Yes ○ No | ○ Visually confirmed |
| a. If No, is there a room available in the facility that could be used for storage and preparation of injectable medications? | ○ Yes ○ No | |
| 4. Does the facility have a policy/procedure for routinely cleaning surface(s) where injectable medications are prepared? | ○ Yes ○ No | |
| 5. Does the facility use manufacturer pre-filled saline syringes or single-use saline vials for flushes?  
*Visual confirmation suggested.* | ○ Yes  
○ No (specify):  
○ Flushes are drawn from the patient’s designated saline bag used for dialysis  
○ Flushes are drawn up from the patient’s dialysis line  
○ Flushes are drawn from a common saline bag used for all patients  
○ Other (specify): | ○ Visually confirmed |
Section 3: Direct Observation of Facility Practices

Certain infection control lapses (e.g., reuse of syringes on more than one patient or to access a medication container that is used for subsequent patients; reuse of lancets) can result in bloodborne pathogen transmission and should be halted immediately. Identification of such lapses warrants appropriate notification and testing of potentially affected patients.

*National Healthcare Safety Network (NHSN) minimum plan requirements for each audit type are included as a number of minimum observations to consider.

VERSION 1.3 – JANUARY 2016
Section 4: Infection Control Guidelines and Other Resources

Check the box(es) next to the guidelines/resources recommended for the facility as a result of this assessment.

☐ Infection prevention resources for dialysis settings: http://www.cdc.gov/dialysis/

☐ Relevant guidelines: http://www.cdc.gov/dialysis/guidelines/index.html

☐ CDC Recommendations for Preventing Transmission in Chronic Hemodialysis Patients: http://www.cdc.gov/mmwr/preview/mmwrhtml/rr5005a1.htm

☐ Prevention tools, including checklists and audit tools: http://www.cdc.gov/dialysis/prevention-tools/index.html

☐ CDC Approach to BSI Prevention in Dialysis Facilities (i.e., the Core Interventions for Dialysis BSI Prevention): http://www.cdc.gov/dialysis/prevention-tools/core-interventions.html

HANDWASHING
Hand Hygiene: Why, How & When?

WHY?

• Thousands of people die every day around the world from infections acquired while receiving health care.

• Hands are the main pathways of germ transmission during health care.

• Hand hygiene is therefore the most important measure to avoid the transmission of harmful germs and prevent health care-associated infections.

• This brochure explains how and when to practice hand hygiene.

HOW?

• Clean your hands by rubbing them with an alcohol-based formulation, as the preferred mean for routine hygienic hand antisepsis if hands are not visibly soiled. It is faster, more effective, and better tolerated by your hands than washing with soap and water.

• Wash your hands with soap and water when hands are visibly dirty or visibly soiled with blood or other body fluids or after using the toilet.

• If exposure to potential spore-forming pathogens is strongly suspected or proven, including outbreaks of Clostridium difficile, hand washing with soap and water is the preferred means.

WHO?

• Any health-care worker, caregiver or person involved in direct or indirect patient care needs to be concerned about hand hygiene and should be able to perform it correctly and at the right time.
HOW TO HANDRUB?

RUB HANDS FOR HAND HYGIENE! WASH HANDS WHEN VISIBLY SOILED

Duration of the entire procedure: 20-30 seconds

1a 1b 2
Apply a palmful of the product in a cupped hand, covering all surfaces; Rub hands palm to palm;

3 4 5
Right palm over left dorsum with interlaced fingers and vice versa; Palm to palm with fingers interlaced; Backs of fingers to opposing palms with fingers interlocked;

6 7 8
Rotational rubbing of left thumb clasped in right palm and vice versa; Rotational rubbing, backwards and forwards with clasped fingers of right hand in left palm and vice versa; Once dry, your hands are safe.

Duration of the entire procedure: 20-30 seconds

RUB HANDS FOR HAND HYGIENE! WASH HANDS WHEN VISIBLY SOILED

1a 1b 2
Apply a palmful of the product in a cupped hand, covering all surfaces; Rub hands palm to palm;

3 4 5
Right palm over left dorsum with interlaced fingers and vice versa; Palm to palm with fingers interlaced; Backs of fingers to opposing palms with fingers interlocked;

6 7 8
Rotational rubbing of left thumb clasped in right palm and vice versa; Rotational rubbing, backwards and forwards with clasped fingers of right hand in left palm and vice versa; Once dry, your hands are safe.
**HOW TO HANDWASH?**

**WASH HANDS WHEN VISIBLY SOILED! OTHERWISE, USE HANDRUB**

Duration of the entire procedure: 40-60 seconds

1. Wet hands with water;  
   2. Apply enough soap to cover all hand surfaces;  
   3. Rub hands palm to palm;  
   4. Palm to palm with fingers interlaced;  
   5. Backs of fingers to opposing palms with fingers interlocked;  
   6. Rotational rubbing of left thumb clasped in right palm and vice versa;  
   7. Rotational rubbing, backwards and forwards with clasped fingers of right hand in left palm and vice versa;  
   8. Rinse hands with water;  
   9. Dry hands thoroughly with a single use towel;  
   10. Use towel to turn off faucet;  
   11. Your hands are now safe.

**Hand care**

- Take care of your hands by regularly using a protective hand cream or lotion, at least daily.
- Do not routinely wash hands with soap and water immediately before or after using an alcohol-based handrub.
- Do not use hot water to rinse your hands.
- After handrubbing or handwashing, let your hands dry completely before putting on gloves.

**Please remember**

- Do not wear artificial fingernails or extenders when in direct contact with patients.
- Keep natural nails short.
WHEN?

YOUR 5 MOMENTS FOR HAND HYGIENE*

1. BEFORE TOUCHING A PATIENT
2. BEFORE CLEAN/ASEPTIC PROCEDURE
3. AFTER BODY FLUID EXPOSURE RISK
4. AFTER TOUCHING A PATIENT
5. AFTER TOUCHING PATIENT SURROUNDINGS

CRITICAL SITE WITH INFECTIOUS RISK FOR THE PATIENT
CRITICAL SITE WITH BODY FLUID EXPOSURE RISK

*NOTE: Hand hygiene must be performed in all indications described regardless of whether gloves are used or not.
### HAND HYGIENE: WHY, HOW & WHEN?

#### 1. Before touching a patient

**WHY?** To protect the patient against colonization and, in some cases, against exogenous infection, by harmful germs carried on your hands

**WHEN?** Clean your hands before touching a patient when approaching him/her

**Situations when Moment 1 applies:**
- a) Before shaking hands, before stroking a child’s forehead
- b) Before assisting a patient in personal care activities: to move, to take a bath, to eat, to get dressed, etc
- c) Before delivering care and other non-invasive treatment: applying oxygen mask, giving a massage
- d) Before performing a physical non-invasive examination: taking pulse, blood pressure, chest auscultation, recording ECG

#### 2. Before clean / aseptic procedure

**WHY?** To protect the patient against infection with harmful germs, including his/her own germs, entering his/her body

**WHEN?** Clean your hands immediately before accessing a critical site with infectious risk for the patient (e.g. a mucous membrane, non-intact skin, an invasive medical device)

**Situations when Moment 2 applies:**
- a) Before brushing the patient’s teeth, instilling eye drops, performing a digital vaginal or rectal examination, examining mouth, nose, ear with or without an instrument, inserting a suppository / pessary, suctioning mucous
- b) Before dressing a wound with or without instrument, applying ointment on vesicle, making a percutaneous injection / puncture
- c) Before inserting an invasive medical device (nasal cannula, nasogastric tube, endotracheal tube, urinary probe, percutaneous catheter, drainage), disrupting / opening any circuit of an invasive medical device (for food, medication, draining, suctioning, monitoring purposes)
- d) Before preparing food, medications, pharmaceutical products, sterile material

#### 3. After body fluid exposure risk

**WHY?** To protect you from colonization or infection with patient’s harmful germs and to protect the health-care environment from germ spread

**WHEN?** Clean your hands as soon as the task involving an exposure risk to body fluids has ended (and after glove removal)

**Situations when Moment 3 applies:**
- a) When the contact with a mucus membrane and with non-intact skin ends
- b) After a percutaneous injection or puncture; after inserting an invasive medical device (vascular access, catheter, tube, drain, etc); after disrupting and opening an invasive circuit
- c) After removing an invasive medical device
- d) After removing any form of material offering protection (napkin, dressing, gauze, sanitary towel, etc)
- e) After handling a sample containing organic matter, after clearing excreta and any other body fluid, after cleaning any contaminated surface and soiled material (soiled bed linen, dentures, instruments, urinal, bedpan, lavatories, etc)

#### 4. After touching a patient

**WHY?** To protect you from colonization with patient germs and to protect the health-care environment from germ spread

**WHEN?** Clean your hands when leaving the patient’s side, after having touched the patient

**Situations when Moment 4 applies, if they correspond to the last contact with the patient before leaving him / her:**
- a) After shaking hands, stroking a child’s forehead
- b) After you have assisted the patient in personal care activities: to move, to bath, to eat, to dress, etc
- c) After delivering care and other non-invasive treatment: changing bed linen as the patient is in, applying oxygen mask, giving a massage
- d) After performing a physical non-invasive examination: taking pulse, blood pressure, chest auscultation, recording ECG

#### 5. After touching patient surroundings

**WHY?** To protect you from colonization with patient germs that may be present on surfaces / objects in patient surroundings and to protect the health-care environment against germ spread

**WHEN?** Clean your hands after touching any object or furniture when living the patient surroundings, without having touched the patient

**This Moment 5 applies in the following situations if they correspond to the last contact with the patient surroundings, without having touched the patient:**
- a) After an activity involving physical contact with the patients immediate environment: changing bed linen with the patient out of the bed, holding a bed trail, clearing a bedside table
- b) After a care activity: adjusting perfusion speed, clearing a monitoring alarm
- c) After other contacts with surfaces or inanimate objects (note – ideally try to avoid these unnecessary activities): leaning against a bed, leaning against a night table / bedside table

*NOTE: Hand hygiene must be performed in all indications described regardless of whether gloves are used or not.*
HAND HYGIENE AND MEDICAL GLOVE USE

- The use of gloves does not replace the need for cleaning your hands.
- Hand hygiene must be performed when appropriate regardless of the indications for glove use.
- Remove gloves to perform hand hygiene, when an indication occurs while wearing gloves.
- Discard gloves after each task and clean your hands – gloves may carry germs.
- Wear gloves only when indicated according to Standard and Contact Precautions (see examples in the pyramid below) – otherwise they become a major risk for germ transmission.

The Glove Pyramid – to aid decision making on when to wear (and not wear) gloves

Gloves must be worn according to STANDARD and CONTACT PRECAUTIONS. The pyramid details some clinical examples in which gloves are not indicated, and others in which clean or sterile gloves are indicated. Hand hygiene should be performed when appropriate regardless of indications for glove use.

STERILE GLOVES INDICATED
- Any surgical procedure;
- Vaginal delivery;
- Invasive radiological procedures;
- Performing vascular access and procedures (central lines);
- Preparing total parental nutrition and chemotherapeutic agents.

EXAMINATION GLOVES INDICATED IN CLINICAL SITUATIONS
- Potential for touching blood, body fluids, secretions, excretions and items visibly soiled by body fluids.

DIRECT PATIENT EXPOSURE: Contact with blood; contact with mucous membrane and with non-intact skin; potential presence of highly infectious and dangerous organism; epidemic or emergency situations; IV insertion and removal; drawing blood; discontinuation of venous line; pelvic and vaginal examination; suctioning non-closed systems of endotracheal tubes.

INDIRECT PATIENT EXPOSURE: Emptying emesis basins; handling/cleaning instruments; handling waste; cleaning up spills of body fluids.

GLOVES NOT INDICATED (except for CONTACT precautions)
- No potential for exposure to blood or body fluids, or contaminated environment

DIRECT PATIENT EXPOSURE: Taking blood pressure, temperature and pulse; performing SC and IM injections; bathing and dressing the patient; transporting patient; caring for eyes and ears (without secretions); any vascular line manipulation in absence of blood leakage.

INDIRECT PATIENT EXPOSURE: Using the telephone; writing in the patient chart; giving oral medications; distributing or collecting patient dietary trays; removing and replacing linen for patient bed; placing non-invasive ventilation equipment and oxygen cannula; moving patient furniture.
Glossary

<table>
<thead>
<tr>
<th><strong>Alcohol-based formulation</strong></th>
<th>An alcohol-containing preparation (liquid, gel or foam) designed for application to the hands for hygienic hand antisepsis.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Body fluids</strong></td>
<td>Blood; excretions like urine, faeces, vomit; meconium; lochia; secretions like saliva, tears, sperm, colostrum, milk, mucous secretions, wax, vernix; exudates and transudates like lymphatic, pleural fluid cerebrospinal fluid, ascitis fluid, articular fluid, pus (except sweat); organic samples like tissues, cells, organ, bone marrow, placenta.</td>
</tr>
<tr>
<td><strong>Clean / aseptic procedure</strong></td>
<td>Any care activity that implies a direct or indirect contact with a mucous membrane, non-intact skin, an invasive medial device. During such a procedure no germs should be transmitted.</td>
</tr>
<tr>
<td><strong>Critical site</strong></td>
<td>Critical sites are associated with risk of infection. They either correspond to body sites or medical devices that have to be protected against harmful germs (called critical sites with risk of infection for the patient), or body sites or medical devices that potentially lead to hand exposure to body fluids and bloodborne pathogens (called critical sites with body fluid exposure risk).</td>
</tr>
<tr>
<td><strong>Hand care</strong></td>
<td>Actions to prevent skin irritation.</td>
</tr>
<tr>
<td><strong>Hand hygiene</strong></td>
<td>Any action of hygienic hand antisepsis in order to reduce transient microbial flora (generally performed either by handrubbing with an alcohol-based formulation or handwashing with plain or antimicrobial soap and water).</td>
</tr>
<tr>
<td><strong>Indication for hand hygiene</strong></td>
<td>Moment during health care when hand hygiene must be performed to prevent harmful germ transmission and/or infection.</td>
</tr>
<tr>
<td><strong>Invasive medical device</strong></td>
<td>Any medical device that enters the body either through a body opening or through a skin or mucous membrane breaking.</td>
</tr>
</tbody>
</table>
How It Works:
Cleaning Hands with Waterless Hand Sanitizer

Components:
Two components:
1. Waterless hand sanitizer
2. Friction

Technique:
Four steps:
1. Make sure all organic matter is removed from hands. All visible organic matter (for example: dirt) must be removed from hands prior to applying waterless hand sanitizer.
2. Apply a dime sized amount of waterless hand sanitizer to the palm of one hand or use a waterless hand sanitizer wipe.
3. Rub hands together covering all surfaces of hands and fingers.
4. Rub until waterless hand sanitizer is absorbed.

How it works:
- Waterless hand sanitizer provides several advantages over hand washing with soap and water. However, they are not effective if organic matter (dirt, food, or other material) is visible on hands.
- Benefits of waterless hand sanitizer: require less time than hand washing
  - act quickly to kill microorganisms on hands
  - are more accessible than sinks
  - reduce bacterial counts on hands
  - do not promote antimicrobial resistance
  - are less irritating to skin than soap and water
  - some can even improve condition of skin
POSTERS, INFORMATIVE TOOLS
Patients with Catheters

TIP 1
Catheters have a higher risk of infection. Ask your doctor about getting a fistula or graft instead.

TIP 2
Learn how to take care of the catheter at home. Do not get it wet.

TIP 3
Wash your hands often, especially before and after dialysis treatment.

TIP 4
Know the steps your healthcare providers should take when using the catheter for treatment.

TIP 5
Know the signs and symptoms of infection and what to do if you think you might have an infection.

TIP 6
Know what to do if you have any problem with the catheter.

6 TIPS to prevent Dialysis Infections

U.S. Department of Health and Human Services
Centers for Disease Control and Prevention

www.cdc.gov/ckd  www.cdc.gov/dialysis/patient

Know the steps your healthcare providers should take when using the catheter for treatment.

Learn how to take care of the catheter at home. Do not get it wet.

Wash your hands often, especially before and after dialysis treatment.

Know the signs and symptoms of infection and what to do if you think you might have an infection.

Know what to do if you have any problem with the catheter.
Patients with Fistulas or Grafts

**TIP 1**
Take care of your dialysis access site at home. Avoid scratching or picking it.

**TIP 2**
Wash your hands often, especially before and after dialysis treatment.

**TIP 3**
Wash or cleanse your dialysis access site prior to treatment.

**TIP 4**
Know the steps your healthcare providers should take when using your dialysis access for treatment.

**TIP 5**
Know the signs and symptoms of infection and what to do if you think you might have an infection.

**TIP 6**
Know what to do if you have any problem with your dialysis access site.

PUT TOGETHER THE PIECES TO PREVENT INFECTIONS IN DIALYSIS PATIENTS

Engage Patients
Discuss important infection prevention practices like hand hygiene with your patients and their caregivers.

Reduce Catheters
Identify and address barriers to fistula/graft placement and catheter removal.

Perform Hand Hygiene and Change Gloves
Know when it is necessary to perform hand hygiene and change your gloves; put this knowledge into practice.

Catheter Care, Scrub the Hubs
Scrub the catheter hubs and allow them to air dry. Use chlorhexidine with alcohol at the catheter exit site and apply an antimicrobial ointment.

Vaccinate Dialysis Staff and Patients
Make sure staff and patients are up-to-date for influenza and hepatitis B vaccinations and patients have received pneumococcal vaccination.

Disinfect the Dialysis Station
Ensure the station is empty before disinfecting. Visibly wet all surfaces with disinfectant.

Track Infections
Know your facility’s rates for important infections like access site and bloodstream infections.

Follow Safe Injection Practices
Never reuse needles or syringes or administer medications from a single-dose vial or IV bag to multiple patients. Use single-dose vials whenever possible and dispose of them immediately after use.

Use Aseptic Technique
Take care to not contaminate the access, bloodlines or hemodialysis circuit. Scrub injection ports prior to use.

Conversation Starter to Prevent Infections in Dialysis Patients

Preventing infections is important for patient safety. The Centers for Disease Control and Prevention (CDC) wants dialysis patients and dialysis centers to start a conversation about preventing infections. Family members can also start the conversation. We hope this guide can be a starting point to improve awareness about patient safety issues.

How does this facility involve patients and their families in infection control activities? Are patients encouraged to speak up when they see a concerning practice (for example, a staff member who does not wash her hands)?

Dialysis centers should educate and empower patients to help prevent infections and support a safe care environment. Talk to your social worker or facility administrator for ideas on how you can get involved.

How does this facility make sure that all patients receive necessary vaccines to prevent illness (such as Hepatitis B, seasonal flu, and pneumococcal vaccines)?

Patients on dialysis have weakened immune systems and should get certain vaccines to keep from getting sick.

How does this facility make sure that dialysis center staff are vaccinated against the flu every year?

Sick staff members can spread the flu to patients. Requiring dialysis center staff to get vaccinated each year can help prevent this spread. Dialysis centers should also have policies that support staff to stay home when they are sick.

Does this facility check all patients for hepatitis C infection?

All hemodialysis patients should be tested for hepatitis C when they start treatment at a center, and then every 6 months if they could become infected. Testing is the only way to know if patients have hepatitis C and to find out if the infection is spreading in the facility.

Does this facility prepare medications in a separate room away from dialysis stations to avoid contamination?

Medications for injection should be prepared away from patient treatment areas to keep them safe from germs. One way to do this is to prepare them in a separate room. More information about injection safety can be found at: www.oneandonlycampaign.org/

To learn more visit www.cdc.gov/dialysis
Does this facility use the CDC recommendations to help prevent infections?

Regular use of CDC resources and recommendations can keep patients from getting serious infections. These recommendations include monitoring staff hand hygiene and vascular access care, training staff, and assisting patients in learning about these practices. Facilities should be using these recommendations and giving their staff feedback to know how they are doing. More information can be found at: www.cdc.gov/dialysis/prevention-tools

How does this facility handle cleaning dialysis stations in between patient treatments – specifically, are dialysis stations cleaned while a patient is still in the chair?

Dialysis stations need proper cleaning to prevent spread of germs between patients. CDC has steps for facilities to follow to make sure every station is safe for the next patient. Some steps should not start until the patient has completed their dialysis treatment and left the station. More information can be found at: www.cdc.gov/dialysis/prevention-tools

Does this facility use a new, disposable dialyzer (artificial kidney) with each dialysis treatment? If not, can a patient opt out of using the dialyzer?

Reused dialyzers must be thoroughly cleaned and disinfected after each use, and mistakes can occur. Talk to your doctor about whether you could use a disposable dialyzer instead of a reused one.

How does this facility support patients to use a fistula instead of a catheter as early in their treatment as possible?

Sometimes it is medically necessary to use a catheter for dialysis. However, catheters can lead to serious infections and other problems. Fistulas and grafts are safer for most patients. Talk to your care team about what is right for you. More information can be found at: www.aakp.org/store/item/understanding-your-hemodialysis-access-options.html

If there was an outbreak in this facility how would the facility communicate with patients? How would the facility partner with others such as the health department?

Contagious germs can spread through dialysis centers. Finding an outbreak (a sudden increase in numbers of sick persons) early and alerting public health can help to stop the spread of infection.
HELPFUL LINKS

CULTURE OF SAFETY AND INFECTION CONTROL
CULTURE OF SAFETY LINKS

This is a CDC link on Core Interventions for safety and infection control in ESRD dialysis patients. Resources include Infection control tools & videos, staff competencies and infection control assessment tools. There is also a resource section for patients.

The ESRD Toolkit was created to help end-stage renal disease clinics prevent healthcare-associated infections in dialysis patients. The toolkit helps dialysis center clinicians make care safer by following clinical best practices, creating a culture of safety, using checklists and other audit tools, and engaging with patients and their families. The toolkit has science-based, practical resources that reflect the real-world experiences of the frontline providers who participated in the toolkit’s development.

This is a great reference article from Duke University on the meaning of a Culture of safety and how to establish that environment in a facility by implementing tools and safety processes and consciously choosing the means of developing and maintaining the organization's culture, the outcome will be as intended: a culture of safety.

http://patientsafetyed.duhs.duke.edu/module_c/culture_saftey/assessing_culture.html

This website provides information on TeamSTEPPS – a system for improving a safe environment for your patients. It contains educational materials and ready to use tools. Developed by the Department of Defense’s Patient safety Program in collaboration with the Agency for Healthcare research and Quality.

This video shows a fictional scenario in which a positive culture of safety overcomes multiple commonly seen barriers to infection prevention in dialysis facilities. Practicing hand hygiene, wearing protective equipment, and following a checklist are just three important ways you can foster a culture of safety. See how these techniques, which can reduce adverse outcomes like central line-associated blood stream infections (CLABSIs), are put into action.
